📍 Istanbul, Türkiye

Summary

Full-stack software engineer with close to 3 years of professional experience in PHP (Laravel), Python and JavaScript. For the past two years my work has centred on **billing & payments**: multi-provider payment gateway integrations, subscription-based recurring billing, refund flows, e-invoicing (UBL) and idempotent money flows. Testability and maintainability come first for me; I write feature and end-to-end tests with Pest/PHPUnit and work with queue-based asynchronous architectures. Solid relational data modelling (MySQL/MariaDB), Docker, Git and CI/CD experience, backed by an Oracle Cloud certification. C1 English and international experience make remote work with global teams natural for me.

Experience

- | | | |
|---|---------------------|-------------------|
| Software Engineer | Fonksiyonel Holding | 04/2026 - Present |
| <ul style="list-style-type: none">Building Kiraladik.com, a rental marketplace SaaS platform, from the ground up; I own it end to end, from refining requirements and system design through testing and production release (Laravel, RESTful API, MySQL, React)Payment infrastructure: abstracted multiple payment providers behind a single gateway interface with a shared error model, payment callback handling and refund support, so switching providers never touches business logicSubscription billing: recurring charges driven by scheduled jobs, a dunning flow for failed payments and an idempotent design that prevents double charging; critical scenarios are locked down by regression testsCancellations, returns and early-termination fees: an idempotent calculation service capped at the contractual limit and priced from a snapshot, wired end to end with receivable records and the return-shipping flowE-invoicing (UBL): outgoing/incoming invoice synchronisation with a SOAP-based provider, with session renewal and retry, plus idempotent processing that never issues a duplicate invoice on repeated triggersDelivered modules such as the coupon engine, cart, stock reservations and a role/permission-based admin panel; designed the relational schema and normalised status fields into lookup tablesWrite feature and full-flow tests with Pest/PHPUnit, monitor queue workers and scheduled jobs in production, and manage rate limiting and security headers behind Cloudflare | | |
| Software Engineer | Delta Servis | 07/2024 - 04/2026 |
| <ul style="list-style-type: none">Developed and maintained modules in a large-scale ERP system covering the operational lifecycle of refurbished mobile devices (intake, listing, approval, returns and stock counts)Built the backend of a Laravel-based finance module, writing business logic, data models and reporting endpoints following MVC and OOP principlesImplemented API integrations with third-party and government services (e-invoicing, shipping, SMS), handling authentication, retries and error-recovery scenariosSet up the RESTful API layer that synchronised products, stock and orders on a marketplace integration platform, and built reporting screens fed by performance-oriented SQL on a multi-database architectureKept performance stable under high data volume with Redis and queued jobs; actively took part in daily stand-ups, sprint planning and code reviews | | |
| Web Development Intern | Adresgezgini | 02/2024 - 06/2024 |
| <ul style="list-style-type: none">Built an interactive map application of Türkiye that let data analysts select multiple provinces or districts and instantly generate keyword sets for Google Ads campaigns (PHP, JavaScript, jQuery, MySQL)Contributed to the backend and frontend development of SEO-friendly corporate websites | | |
| Web Development Intern | Ünsped | 07/2021 - 09/2021 |
| <ul style="list-style-type: none">Contributed to frontend and backend development of ASP.NET MVC web projects; designed the database with Entity Framework and SQL Server and built a parameter-based shipping cost calculation page from scratch | | |

Skills

Programming Languages: PHP, Python, JavaScript, SQL

Backend: Laravel, Eloquent ORM, RESTful API design, service layer, Dependency Injection, PSR standards

Frontend: React, Vite, jQuery, AJAX, HTML/CSS, TailwindCSS, Bootstrap

Databases: MySQL / MariaDB, SQL Server, relational schema design and ER diagrams, query optimisation

Async & Integrations: Redis, queue-based processing, scheduled jobs, webhooks/callbacks, idempotency, REST & SOAP, payment providers, e-invoicing (UBL), OAuth

Testing & Quality: PHPUnit / Pest for unit, feature and end-to-end tests, mocking external services, code review

DevOps & Cloud: Docker, Git (feature branch / PR workflows), GitHub Actions (CI/CD), Linux server administration, Oracle Cloud (OCI)

Ways of Working: Agile / Scrum, sprint and backlog planning, code review, technical documentation, AI-assisted development (Claude Code, Copilot)

Languages: Turkish (native), English (C1) – experience working in international and remote teams

Projects

Cloud Resume OCI Functions · API Gateway · GitHub Actions · Python

- A dynamic personal CV built on a fully serverless architecture, featuring a visitor counter, automated reporting and a multilingual responsive interface, released through a CI/CD pipeline

YouTube Transcriber Python · Tkinter · OpenAI Whisper · yt-dlp

- A Python desktop application that turns speech in YouTube videos into professional transcripts using AI; multilingual speech recognition, automatic summarisation and PDF export

Education

Manisa Celal Bayar University Manisa, Türkiye

BSc in Computer Engineering (English) 2018 - 2024

Certifications

Oracle Cloud Infrastructure 2025 Certified Foundations Associate 2025

Additional Experience

Erasmus + Intern Czestochowa University of Technology, Poland 03/2023 - 06/2023

- Set up in-pipe flow (CFD) simulations with ANSYS Fluent; analysed the results and prepared technical reports in English

Work & Travel Program United States 2022 - 2023

- Worked in the US for roughly 10 months over two summer seasons, developing my English and cross-cultural communication skills
